EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Pursuant to MPEP 606.01 the **Title** is changed to read:

**---- METHOD FOR TRACKING RELATIONSHIPS BETWEEN SPECIFIED FILE
NAME AND PARTICULAR PROGRAM USED FOR SUBSEQUENT ACCESS IN A
DATABASE---**

Reasons for allowance

The present application has been thoroughly reviewed, upon searching a variety of databases, the examiner submits that claims 1-13,16,22-34,38-50,53 [re-numbered as: 1-41] are allowable in light of the applicant argument at page 11-18 and in light of the prior art made of record.

The following is an examiner's statement of reasons for allowance:

The present invention is directed to tracking relationships between applications and associated data files, more specifically, association between the application and data and configuration files is created and stored in a database that can be subsequently accessed

The closest prior art Howard et al. US Patent No. 6185574 is directed to organizing, processing file information, more specifically, gathering information about hierarchical directories, organizing or manipulation of directory information managing system data, regardless of application, based on information obtained from the virtual directory system. Howard also teaches various components of the virtual directory and navigation system can seamlessly link with the operating system of the computer to provide a parallel method for organizing, accessing and maintaining the computer system's storage [see Abstract, col 3, line 62-67, col 4, line 1-3].

However, Howard et al either singularly or in combination, fail to anticipate or render obvious the recited feature "*responsive to creating the association, storing the association between the specified file name and the particular program, wherein the association is used for subsequent accesses to the file and is stored in relation to other stored associations, said other associations respectively corresponding to each of the other file names for which file access is requested by the particular program*" in claims 1,22,38. These features, in conjunction with all other limitations of the dependents and independent claim renders Claims 2-13,16,23-34,39-50, 53 are allowable.

The newly cited art Neil Andrew Cowie et al. GB 2378015 A published on 29 Jan 2003 is directed to detecting computer programs within packed computer files, more specifically recognizing resources specifying data that is highly characteristic of the computer program to which it relates and can be used as an effective tool to identify specific known computer programs within the packed files [see Abstract, page 2, 6-15]
